

In 2006, we increased our surcharge rates for the first time in almost two decades. From that time forward, we have determined that they must be evaluated on an annual basis to stay current with our incurred costs of treatment. They may not change on an annual basis, but they will need to be looked at frequently to assure that we are keeping up with the costs of treatment. The Commonwealth and Federal regulations allow us to recover our costs for treatment of excess organics to our wastewater plants.

This sheet will accompany your future permits and should be kept for reference; however these rates will not be incorporated into your Discharge Permit as before. If a rate changes annually, it will be posted here first; however every effort will be made to mail you a hard copy through the postal service as well. Please check it periodically as these rates will be subject to change. The following surcharge rates shall apply for each pound of loading in excess of the concentration above the local limit.

If you have any questions, please contact the Pretreatment Coordinator directly at (270) 869-6622 or (270) 826-2824 or you may email at: prestonr@hkywater.org
